

Effet de viscosité élongationnelle de l'écoulement Streaming généré par un cylindre vibrant

S. Amir Bahrani, Nicolas Périnet, Maxime Costalonga, Laurent Royon & Philippe Brunet

Écoulement Streaming

○ Rayleigh-Schlichting streaming

Bahrani et al., *Phys. Rev. Fluids* (Preprint 2019)

○ Eckart streaming

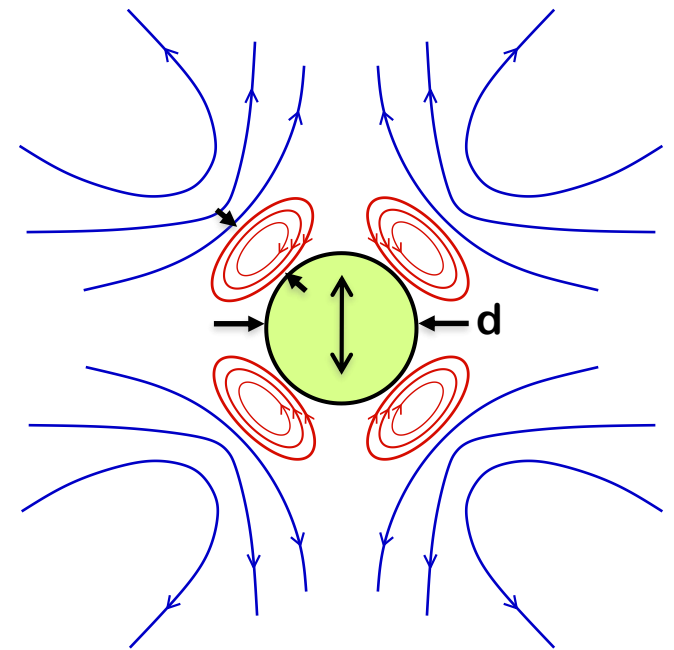

L. N. Liebermann, *Phys. Rev.* (1949)

Dans les deux cas l'écoulement streaming est du à la dissipation visqueuse

Origine physique

$$\rho \left(\frac{\partial \mathbf{v}}{\partial t} + (\mathbf{v} \cdot \nabla) \mathbf{v} \right) = -\nabla P + \mu \nabla^2 \mathbf{v}$$

$$\mathcal{R} = \frac{\text{Convective}}{\text{Diffusive}}$$

Results et discussion

PEO, $M_v = 4 \times 10^6$, $c = 2300$ ppm
